I would favor option 3. I think it would be better to charge \$13.00 per couple, since you can't "turn the orchestra off" for those who don't wish to dance or listen. Also, if I have calculated correctly, you would need maximum attendance (150 people) averaging 4 drinks a piece to get the \$150 orchestra money from the .50 shit. I don't think this is likely and you might go in the hole. As to the \$.25 bar shit, I think this is extremely reasonable. We may end up with a lot of drinks on our hands. Can you really make all bar expenses at that rate?
